

Branch Out for Clean Air!

*This summer...why not
go out on a limb and try something new?*

*In ONE HOUR, a gas-powered lawn mower emits as much
pollution as eight new cars traveling at 55 mph.*

How about planting a few trees so you have less lawn to mow? It'll save you money, provide shade and help the environment!

Trees are amazing—they absorb CO₂ and other pollutants, but too much pollution can harm trees. The more trees we have, the better off we'll all be.

And remember to enter-to-win:
